### NEXYMA 40 AND NEXYMA 80

Nexyma 40 and Nexyma 80 are two new types of near-vision lenses for high-comfort vision in the near and intermediate zones. The figures 40 and 80 represent the respective main visual distance in centimeters.

#### What's the Difference?

While your current progressive lenses are designed for primarily distance vision with the ability to see at intermediate and near areas, Nexyma 40 is designed primarily for near viewing with the ability to see intermediate and Nexyma 80 is designed primarily for intermediate viewing area with the ability to see near.

#### Ergonomic Design

Nexyma lenses are ergonomically designed to ensure a relaxed head position. The wearer benefits from the greatest possible vision comfort for all activities at work or for leisure activities such as working on a P.C. at a desk, DIY, crafts, cooking, housework, reading, painting and playing music.

#### Nexyma 40

- For vision at a distance of approximately 40 cm
- Promotes relaxed vision
- Extended vision zone beyond the near area
- Ideal lens for reading, model building and crafts

#### Nexyma 80

- For vision at a distance of approximately 80 cm
- Fatigue-free work thanks to a natural head posture
- Clear vision at near
- Ideal lens for hobbies and DIY work, office work, playing music, cooking

### WHAT WILL NEXYMA DO FOR ME?

#### More Vision

Nexyma provides vision zones of optimum size and clarity far beyond the reading distance. This makes it the ideal lens for everyone who wants more powerful reading glasses or the optimum addition to their progressive lenses.

#### More Comfort

The large visual field allows comfortable and fatigue-free vision with relaxed head and body posture.

#### Best Compatibility

Adaptation to Nexyma is immediate and can be worn alternately with progressive lenses without problems.

#### Affordable Pricing

Nexyma lenses cost less than regular progressive lenses, so now you can use Nexyma with your current progressive lenses at a reasonable price.
